Delivering excellent software solutions

ISO SCHOOL ADMINISTRATION SYSTEM

ISO SAS: A fully customizable software system intended for use by administrative staff & management of nursery, primary and secondary schools.

Why use the SAS?

- Structured and secure storage of students, income, expenses, accounts, academics, payroll and inventory information for fast and convenient access.
- Eradicate dependency on any staff member (and their computer skills) to maintain such important records for the school. Our user friendly interface requires no skills to use.
- Automate the periodic, repetitive, error-prone and time consuming job of manually preparing various reports so that your staff can focus on delivering higher quality education to your students.
- Facilitate interactive communication with parents via SMS messaging and web portal for parents to log in and view students results, fees dues and other relevant information

Features at a glance

- Uses class fees structure for student billing instead of individual students' invoices. This eliminates mistakes and fraud in student billing.
- Supports optional fees items / services such as accommodation, transport, uniform and others as supported by the school.
- Compatible with banks for use with students' control number payments
- Simplifies retrieval of past years' payments information and clearing of the balances.
- Generates payment receipts and payment vouchers for every income or expense so you don't have to write by hand. Students' receipts can also automatically indicate the updated balance due.
- Manages requisitions from procurement to payment. Staff may request for funds which are then approved by management, and the system keeps track of all relevant expenses, receipts and documentation
- Generates accurate and detailed expense reports and other financial reports including income statement, balance sheet, trial balance and property, plant & equipment
- Simplifies management of students' pocket / medical /caution money balances & records for boarding schools.
- Offers you the ability to broadcast SMS messages to parents of the students very efficiently.
- Can send each student's examination results to their respective parents via SMS.
- Automates preparation & printing of debt notification letters for parents who have not completed their respective payments for a specified installment. Can also send dues via SMS.

- Automates creation of weekly teaching timetables without conflicts
- Simplifies creation of staff monthly payroll and generates various payroll reports and forms such as PAYE, NSSF, HESLB in defined formats.
- Simplifies staff loans management
- Supports school fees discounts / concessions, and makes sure they are well documented.
- Alumni information is also stored in the system. Graduating students did not finish school fees payments? No problem. Their balance is there to stay until cleared.
- Stores student's examinations scores and can prepare class-wise ranked examination results with insightful statistics for every subject, using both the school's and NECTA's grading structure.
- Generates continuous assessment & annual academic reports for each student as per the structure of each class. The end-of-term hassle of preparing these reports is fully omitted.
- Allows the school to maintain detailed disciplinary records for students as well highlighting the worst and best students discipline-wise. This is very useful for seminaries.
- Automates creation of student and staff ID cards
- School Inventory Management, stock taking & control, stock movement from the store.
- Library system for books inventory, staff & student borrowing and billing in case of failure to return book.
- Robust access control and privilege management. You can rest assured that your employees will never overstep their boundaries of access to information in your organization, while enabling each user to perform their day to day activities in the system. Control is in your hands.
- Technical support (remote and on-site), user training and system maintenance will ensure that you have a seamless and trouble-free experience using the system.
- Backups and backup reminders. With these, nothing will ever get lost.

Perhaps our biggest feature is **customizability**. **70 schools in different regions in Tanzania, Malawi and Kenya are reliably using the ISO School Administration System since 2015.** Tell us what's different about your school so that we can make the system work for you too. Having built it from the ground up we are capable and more than willing to modify it to perfectly fit with your organization; now and in the future.

INSTALLATION & SUPPORT

- Installed locally in the school premises. Can be accessed by various offices within the school. **Internet connection is not required** to use the system. Remote access option available.
- In recognition of the Swahili saying "Mwanzo mgumu" i.e. "Beginnings is challenging" we will provide **one year of free support** and maintenance. All you have to do is call and we will assist until you have full confidence in the system.

PRICING (simple & inexpensive)

- No recurring license fees to access the software and your data. Flat fee for perpetual license. **Pay once, use forever.**
- Optional and inexpensive yearly maintenance & support fee if you'd like to always stay updated and receive the best support possible.
